

Herbal Hair Colour Powder Gold-blonde

Manufacturer: Logona
Order ID: 601100
Price: 12.95 €

Product description:

The gold-blonde nuance is particularly suitable for light- to medium-blonde hair. The herbal hair colours are especially gentle and lasting. In contrast to chemical hair dyes, they do not intervene with the natural structure of hair. The herbal hair colour covers every hair like a film. As a result, the original hair colour also determines the individual dye result. A composition of organic henna powder* and other colouring plants, in addition to caring botanical ingredients like organic jojoba oil*, provides radiant colour, shine and volume.

vegan, lactose-free

Ingredients:

* from controlled organic cultivation

Tips from Gabi Köberl:

Shine and colour for your hair

Henna is grown in North and east Africa, in addition to large parts of Asia. It needs abundant light and warmth in order to thrive. In the Orient, the mesmerising scent of henna has been cherished for centuries. In light of its pleasant fragrance, the bush is an extremely popular garden plant. The leaves of the bush are used to make henna powder, which was already used for body painting in antiquity and has long been known as a natural hair-colouring agent. Indigo is a colour that gleams between deep blue and violet, and was already produced using the leaves of the indigo plant in antiquity. Hailing from East Asia and India, the plant was brought to Europe via Egypt, and soon displaced the majority of previously used colouring agents. The senna and indigo leaves lend the hair subtle colour, but above all rich nourishment and shine.
