

Herbal Hair Color Natural Red

Manufacturer: Sante
Order ID: 840184
Price: 7.49 €

Product description:

Give your hair a sexy colour boost, the natural way. Sante Herbal Hair Colour in Natural Red is free from all harsh chemicals and is completely vegan and BDIH certified. This gentle and natural herbal hair colour is activated with hot water, which creates a creamy paste that is very easy to apply. It will give your hair a permanent colouring as well as a deeply conditioned glow. One package is sufficient for application on shoulder length hair. Natural Red shade is perfectly suited to light blonde to medium brown hair.

It's fun to experiment with different hair colours and change up your look every now and then. However, it is not fun to suffer the damage that frequent use of harsh chemical hair dyes can do to your hair. Using these types of hair dyes on a regular basis can leave your hair dry and brittle and can cause split ends and breakage. You can give your hair a deep conditioning treatment to try to salvage it, but this will only glue the damage back together temporarily because once your hair has been damaged in this way by peroxide, ammonia and other chemical compounds then it will never really be the same.

However, with Sante Herbal Hair Colours you will be able to experiment with your colour while still keeping your hair healthy and shiny. This is because Sante Herbail Hair Colours are made with no ammonia, no peroxide and no harsh chemical ingredients. Instead, these hair colours use natural botanical extracts that will change the colours of your hair subtly and enhance your own natural colour.

Why not try it today and give yourself a colour makeover that will leave your hair looking healthier than ever before?

Ingredients:

Lawsonia Inermis (Henna) Extract / Lawsonia Inermis (Henna) Leaf Powder, Algin, Hydrolyzed Wheat Protein

Tips from Gabi Köberl:

To apply the hair colour treatment, read the instruction on the packet carefully. Always perform a strand test in advance to see how your hair will react to the dye.
