

## Analogue Thermometer

Manufacturer: Khadi  
Order ID: Kh18235  
Price: 12.95 €

### Product description:

This practical, universal analogue thermometer is ideal for measuring the correct water temperature for mixing your khadi Natural Hair Color. Because the correct temperature of the stirring liquid is important for an optimal color result: blond and brown shades you stir with 50 ° C warm water, the khadi reds are mixed with 80-90 ° C hot water. With this mercury-free analogue thermometer, the temperature is determined in just a few seconds. Of course, the thermometer is universally applicable for many other purposes in the home, such as measuring the right temperatures for tea, wines and more.

### Tips from Gabi Köberl:

Heat the required amount of water in a kettle or saucepan. In between, dip the analogue thermometer to check the temperature. If necessary, add cool water or let the water heat up until the desired temperature is reached. If you use blonde or brown khadi nuances, the water temperature should be 50 ° C when mixing the natural hair color. For red hues, the henna colors, it is important to use 80-90 ° C hot water to achieve an optimal color result.
